# Wrapped Knot

This type of knot can be a stylish way to finish off projects, secure ends or create thick cording through a project.

Step 1:

Loop a separate cord to the left of bunch of cords and cross the left end of the loop to the right, over the bunch of cords.

Step 2:

Bring the end of the loop around the back of the entire bunch of cords and initial loop.

Step 3:

Wrap the separate cord tightly around the entire bunch of cords several times.

Step 4:

When desired length is reached, pull the end of the separate cord through the initial loop and pull both ends of the separate cord to secure.
